SURGICAL TREATMENT OF OBESITY

Effective Date: August 31, 2018  
Review Dates: 8/11, 12/11, 2/12, 2/13, 2/14, 11/14, 2/15, 2/16, 2/17, 2/18, 5/18, 5/19
Date Of Origin: August 10, 2011  
Status: Current

Note: This medical policy does not apply to Priority Health Medicare members. Medicare claim billing and processing must follow CMS guidelines for coverage.

Summary of Changes

I. POLICY/CRITERIA

A. Criteria 1-4 must be met to be considered for Primary Bariatric Surgical (PBS) and Revisional Bariatric Surgical (RBS) treatment of obesity:

1. Age > 18 years and the surgery must be performed by a surgeon who is a regular member in good standing of the American Society for Metabolic and Bariatric Surgery (ASMBS).

2. Prior approval must be obtained for Bariatric Surgery.

3. A pre-operative care and evaluation must occur in which all of the following must be met:

   a. Complete medical evaluation by PCP or other physician.

   b. Evidence that all other alternatives have been discussed with and offered to patient, and that all reasonable non-surgical options have been attempted.

   c. Documentation of active participation in and compliance with a medical weight management program, when applicable**, provided by a credentialed physician with a declared interest in the management of obesity, the member’s primary care physician (PCP) or other managing physician as outlined in the Medical Management of Obesity policy #91594. The medical weight management program must include all of the following:

      i. Documentation of active participation and compliance with a medical weight management program for a minimum continuous duration of 6 months* with at least 6 office visits including both a diet and exercise component and in which the obesity and weight-related conditions (i.e. diabetes, hypertension and hyperlipidemia) are being addressed.

*Priority Health Medicaid and Commercial Individual products require compliance with a medical weight management program
for a minimum continuous duration of 12 months and at least 12 office visits.

ii. Thorough progress notes and records that include the following regarding the obesity problem at each visit:

a) An actual measured weight and calculated BMI  
b) The patient’s history  
c) The physical findings  
d) The physician’s assessment  
e) The physician’s treatment recommendation(s)/plan(s).

The medical weight management program must be completed within two years of the request for surgery.

All documentation in #3 above should be submitted with the request for Bariatric Surgery. The reported BMI should be based upon measurement of height and weight within one month of requesting the surgery.

Please use the link below to access templates that demonstrate the required documentation. These forms may be used in conjunction with the medical record to document the physician directed weight management program.

**Criterion 3c for at least 6 months medical management (12 months for Priority Health Medicaid and Commercial Individual products). This does not apply if BMI is ≥ 50.

The Medical Director will review each such case on an individualized basis to determine compliance with this policy section.

Past weight loss attempts without physician supervision through programs such as Weight Watchers, Curves, personal trainers, etc. are insufficient to meet this criterion.

d. A comprehensive psychosocial evaluation conducted by a licensed behavioral specialist*. It is recommended that this evaluator possess knowledge, experience, and training relevant to obesity, eating disorders, and weight loss surgery.

This evaluation must establish the patient’s:
- Emotional stability
- Ability to comprehend the risks of surgery and to give informed consent
- Ability to cope with expected post-surgical lifestyle changes and limitations.

*For Medicaid/Health Plan Michigan members, this evaluation must be obtained by a psychiatrist.

e. None of the following medical conditions is present:

   i. Pregnancy/lactation.
   ii. Severe psychopathology.

      Note: For members who have severe psychopathology who are currently under the care of a psychiatrist, or who are on psychotropic medications, preoperative psychiatry clearance is necessary in order to determine informed consent and an ability to comply with pre- and post-operative regimen.

   iii. Medical condition that makes patient a prohibitive risk.
   iv. Any disease (e.g. cancer, uremia, liver failure), associated with a likelihood of survival less than 1 year.
   v. Substance abuse including alcohol and other drugs of abuse.

      Note: For members who have a history of illegal drug use, there must be documented compliance with abstinence, including negative monthly urine drug screens for at least six continuous months.

   vi. Tobacco use.

      Note: For members that have a current history of smoking or smoking within the past two years, documented compliance demonstrating smoking cessation, including two negative cotinine levels within a 30 day time period, is required. These levels must be taken no earlier than 6 weeks prior to requesting Bariatric Surgery.

4. Weight criteria – Member must meet “a” or “b” or “c”:

   a. BMI \geq 35, participation in medical weight management program, and at least one of the following life-endangering obesity-related co-morbidities:
i. Symptomatic obstructive sleep apnea unresponsive to conservative treatment (e.g., C-Pap), with evidence of right ventricular hypertrophy (RVH).

ii. Significant atherosclerotic cardiovascular disease (e.g. right ventricular hypertrophy (RVH), left ventricular hypertrophy (LVH), arteriosclerotic heart disease (ASHD)).

iii. Medically refractory hypertension not adequately controlled with 3 or more antihypertensive agents.

iv. Poorly controlled diabetes, with evidence of end organ damage (including, but not limited to: retinopathy, nephropathy, neuropathy, or cardiomyopathy), evaluated by a specialist with specific expertise in diabetes.

v. Congestive heart failure (CHF) Class III or IV.

Note: Hyperlipidemia, gastroesophageal reflux disease (GERD), and degenerative joint disease do NOT qualify as they are NOT considered life endangering.

b. BMI ≥ 40. A co-morbidity is not required. However, participation in a medical weight management program is required.

c. BMI ≥ 50. Neither a co-morbidity, nor participation in a medical weight management program, is required.

B. Limitations

1. The following bariatric procedures are covered when the surgical criteria above have been met:

   a. Roux-en-Y gastrojejunostomy
   b. Laparoscopically Adjustable Banding with FDA approved device
   c. Biliopancreatic Diversion with Duodenal Switch (BPD/DS)
   d. Sleeve gastrectomy

2. For components of the medical weight management program please see the Medical Management of Obesity Medical Policy #91594.

3. Coverage for medical and surgical programs is limited by applicable copays, coinsurance and deductibles.

4. Other bariatric procedures, including but not limited to the following, are not covered:
a. Gastric banding with devices that are not FDA approved
b. Gastric balloon and space occupying devices (e.g. Orbera, Reshape Duo)
c. Other intestinal bypass procedures
d. Mini-gastric bypass
e. Endoscopic revision of bariatric surgery, including the ROSETM (Revision Obesity Surgery, Endoscopic) and Stomaphyxtm procedures.
f. Vagal Blocking for Obesity Control (e.g. VBLOC, Maestro Rechargeable System)
g. AspireAssist device

5. Coverage for Medicaid/Healthy Michigan Plan members is limited to one bariatric surgery per lifetime. Unless Medically/Clinically Necessary (see Corrective Revisional Bariatric Surgery - Section I, C, 2, a-c below), a second bariatric surgery is not Covered, even if the initial bariatric surgery occurred prior to Coverage under this plan.

6. The adjustable silicone gastric banding (LAP-Band) was reviewed by Priority Health’s Technology Assessment Committee (TAC) in September 2003, December 2003, March 2005 and June 2005 and this policy reflects recommendations of the TAC. Biliopancreatic Diversion with Duodenal Switch was reviewed by Priority Health’s Technology Assessment Committee in March 2006 and this policy reflects recommendation of the TAC. Endoscopic revision of bariatric surgery was reviewed by Priority Health’s Technology Assessment Committee in December 2007 and this policy reflects the recommendation of TAC.

C. Revisional Bariatric Surgery (RBS):

Revisional Bariatric Surgery (RBS) includes Conversion RBS (PBS to second procedure), or Corrective RBS (to treat complications of PBS).

1. Conversion Revisional Bariatric Surgery (Conversion RBS):
   a. In members whose primary bariatric surgery (PBS) was Roux-en-Y gastric bypass (RYGB), vertical sleeve gastrectomy (VSG), or biliopancreatic diversion with duodenal switch (BPD-DS) or without duodenal switch (BPD), Conversion RBS is medically necessary in patients who continue to meet medical necessity criteria for PBS (as in I.A. above), and who meet all of the following medical necessity criteria:
      i. Conversion to a sleeve gastrectomy, RYGB or BPD/DS is considered medically necessary for members who have not had adequate success (defined as loss of more than 50% of excess body weight) 2 years following the primary bariatric surgery (PBS) procedure.
ii. The member has been compliant with a prescribed nutrition and exercise program following the procedure as evidenced by clinical documentation and nutrition counseling to verify report of inability to eat appropriate foods and calorie due to persistent symptoms (pain, nausea, emesis).

b. In members whose primary bariatric surgery (PBS) was an adjustable gastric band (AGB), Conversion RBS is medically necessary for members who continue to meet medical necessity criteria for PBS (as in I.A. above), and who meet all of the following medical necessity criteria:

i. Conversion to a sleeve gastrectomy, RYGB or BPD/DS is considered medically necessary in members who have not had adequate success (defined as loss of more than 50% of excess body weight) 2 years following the primary bariatric surgery (PBS) procedure.

ii. The member has been compliant with a prescribed nutrition and exercise program following the procedure as evidenced by clinical documentation and nutrition counseling to verify report of inability to eat appropriate foods and calories due to persistent symptoms (pain, nausea, emesis).

iii. There are complications that cannot be corrected with band manipulation, adjustments or removal.

2. Corrective Revisional Bariatric Surgery (Corrective RBS):

a. In members whose primary bariatric surgery (PBS) was Roux-en-Y gastric bypass (RYGB), vertical sleeve gastrectomy (VSG), or biliopancreatic diversion with duodenal switch (BPD-DS) or without duodenal switch (BPD), Corrective RBS is considered medically necessary to correct acute or chronic mechanical and or anatomic complications including fistula, obstruction, stricture, marginal ulcer, if the above results in abdominal pain, inability to eat or drink or causes persistent vomiting of prescribed meals.

b. In members whose primary bariatric surgery (PBS) was an adjustable gastric band (AGB), Corrective RBS including manipulation, adjustments, repair or removal is considered medically necessary if there are complications (e.g., port leakage, slippage, erosion) resulting in inability to eat appropriate foods due to persistent symptoms.

c. In members whose primary bariatric surgery (PBS) was vertical sleeve gastrectomy (VSG), or biliopancreatic diversion with duodenal switch (BPD-DS) or without duodenal switch (BPD), or adjustable gastric
band (AGB). Corrective RBS with Roux-en-Y gastric bypass (RYGB) or BDP-DS, is considered medically necessary for persistent gastroesophageal reflux disease unresponsive to medical therapy for members who continue to meet the criteria in I.A. above.

D. Not Medically Necessary:

1. Poor response to Primary Bariatric Surgery due to patient post-operative behavior (not following dietary restriction, large portion meals, lack of documented exercise) does not constitute a surgical complication and the revision of this condition is considered not medically necessary.
2. PBS and RBS will frequently ameliorate symptoms of co-morbidities such as diabetes, gastroesophageal reflux disease and obstructive sleep apnea. However, the purpose of bariatric surgery in obese persons is to achieve weight loss. Therefore, coverage would not exist for bariatric surgery to treat co-morbidities caused or exacerbated by obesity unless in accordance with the limitations and language as above.

E. SPECIAL NOTES

Specific group benefit plans may require coverage for the medical or surgical treatment of obesity beyond the coverage set forth in this policy.

II. MEDICAL NECESSITY REVIEW

☒ Required ☐ Not Required ☐ Not Applicable

III. APPLICATION TO PRODUCTS

Coverage is subject to member’s specific benefits. Group specific policy will supersede this policy when applicable.

❖ HMO/EPO: This policy applies to insured HMO/EPO plans.
❖ POS: This policy applies to insured POS plans.
❖ PPO: This policy applies to insured PPO plans. Consult individual plan documents as state mandated benefits may apply. If there is a conflict between this policy and a plan document, the provisions of the plan document will govern.
❖ ASO: For self-funded plans, consult individual plan documents. If there is a conflict between this policy and a self-funded plan document, the provisions of the plan document will govern.
❖ INDIVIDUAL: For individual policies, consult the individual insurance policy. If there is a conflict between this medical policy and the individual insurance policy document, the provisions of the individual insurance policy will govern.
❖ MEDICARE: Coverage is determined by the Centers for Medicare and Medicaid Services (CMS); if a coverage determination has not been adopted by CMS, this policy applies.
❖ MEDICAID/HEALTHY MICHIGAN PLAN: For Medicaid/Healthy Michigan Plan members, this policy will apply. Coverage is based on medical necessity criteria being met and the appropriate code(s) from the coding section of this policy being included on the Michigan Medicaid Fee Schedule located at: http://www.michigan.gov/mdch/0,1607,7-
IV. DESCRIPTION

Surgical treatment for obesity may be a covered benefit for the indications described above. The treatment of co-morbidities (e.g. diabetes mellitus, hypertension) associated with obesity is a covered benefit in accordance with the limitations and language in the coverage documents. It is Priority Health’s position that co-morbidities that are related to an obesity diagnosis should be treated medically, and if such co-morbidities can be controlled by less invasive means than bariatric surgery, bariatric surgery is not the preferred treatment.

All surgical services for weight management require prior authorization.

The AspireAssist (Aspire Bariatrics) device: To place the device, surgeons insert a tube in the stomach with an endoscope via a small incision in the abdomen. A disk-shaped port valve that lies outside the body, flush against the skin of the abdomen, is connected to the tube and remains in place. Approximately 20 to 30 minutes after meal consumption, the patient attaches the device’s external connector and tubing to the port valve, opens the valve and drains the contents. Once opened, it takes approximately five to 10 minutes to drain food matter through the tube and into the toilet. The device removes approximately 30 percent of the calories consumed. In a clinical trial of 111 patients treated with AspireAssist and appropriate lifestyle therapy, and 60 control patients who received only the lifestyle therapy, patients using AspireAssist lost an average of 12.1 percent of their total body weight compared to 3.6 percent for the control patients after one year.

V. CODING INFORMATION

ICD-10 Codes that may support medical necessity:
E66.01 Morbid (severe) obesity due to excess calories
E66.09 Other obesity due to excess calories
E66.1 Drug-induced obesity
E66.2 Morbid (severe) obesity with alveolar hypoventilation
E66.8 Other obesity
E66.9 Obesity, unspecified

The following codes may be reported as secondary Dx only
Z68.35 Body mass index (BMI) 35.0-35.9, adult
Z68.36 Body mass index (BMI) 36.0-36.9, adult
Z68.37 Body mass index (BMI) 37.0-37.9, adult
Z68.38  Body mass index (BMI) 38.0-38.9, adult
Z68.39  Body mass index (BMI) 39.0-39.9, adult
Z68.41  Body mass index (BMI) 40.0-44.9, adult
Z68.42  Body mass index (BMI) 45.0-49.9, adult
Z68.43  Body mass index (BMI) 50-59.9, adult
Z68.44  Body mass index (BMI) 60.0-69.9, adult
Z68.45  Body mass index (BMI) 70 or greater, adult

CPT/HCPCS Codes:
*No Prior auth required for these procedures

43644  Laparoscopy, surgical, gastric restrictive procedure; with gastric bypass and Roux-en-Y gastroenterostomy (roux limb 150 cm or less)
43645  Laparoscopy, surgical, gastric restrictive procedure; with gastric bypass and small intestine reconstruction to limit absorption

43770  Laparoscopy, surgical, gastric restrictive procedure; placement of adjustable gastric band (gastric band and subcutaneous port components)
43771  Laparoscopy, surgical, gastric restrictive procedure; revision of adjustable gastric band component only
43772*  Laparoscopy, surgical, gastric restrictive procedure; removal of adjustable gastric band component only
43773  Laparoscopy, surgical, gastric restrictive procedure; removal and replacement of adjustable gastric band component only
43774*  Laparoscopy, surgical, gastric restrictive procedure; removal of adjustable gastric band and subcutaneous port components
43775  Laparoscopy, surgical, gastric restrictive procedure; longitudinal gastrectomy (i.e., sleeve gastrectomy)

43845  Gastric restrictive procedure with partial gastrectomy, pylorus-preserving duoden ileostomy and ileo ileostomy (50 to 100 cm common channel) to limit absorption (biliopancreatic diversion with duodenal switch)
43846  Gastric restrictive procedure, with gastric bypass for morbid obesity; with short limb (150 cm or less) Roux-en-Y gastroenterostomy

43848  Revision, open, of gastric restrictive procedure for morbid obesity, other than adjustable gastric band (separate procedure)
43886*  Gastric restrictive procedure, open; revision of subcutaneous port component only
43887*  Gastric restrictive procedure, open; removal of subcutaneous port component only
43888  Gastric restrictive procedure, open; removal and replacement of subcutaneous port component only

S2083*  Adjustment of gastric band diameter via subcutaneous port by injection or aspiration of saline

43999  Unlisted procedure, stomach (Explanatory notes must accompany claim)
Use this code for billing: Open sleeve gastrectomy

Not covered:
43647  Laparoscopy, surgical; implantation or replacement of gastric neurostimulator electrodes, antrum
43648  Laparoscopy, surgical; revision or removal of gastric neurostimulator electrodes, antrum
43842  Gastric restrictive procedure, without gastric bypass, for morbid obesity; vertical-banded gastroplasty
43843  Gastric restrictive procedure, without gastric bypass, for morbid obesity; other than vertical-banded gastroplasty
43847  Gastric restrictive procedure, with gastric bypass for morbid obesity; with small intestine reconstruction to limit absorption
43881  Implantation or replacement of gastric neurostimulator electrodes, antrum, open
43882  Revision or removal of gastric neurostimulator electrodes, antrum, open
43659  Unlisted laparoscopy procedure, stomach
43999  Unlisted procedure, stomach when billed for:
   When billed for: Balloon Gastroplasty
   Endoscopic revision of bariatric surgery
   Open gastric band
   Laparoscopic vertical banded gastroplasty
   Open sleeve gastrectomy (Not covered for Priority Health Medicare)
   (Explanatory notes must accompany claims billed with unlisted codes.)
0312T  Vagus nerve blocking therapy (morbid obesity); laparoscopic implantation of neurostimulator electrode array, anterior and posterior vagal trunks adjacent to esophagogastric junction (EGJ), with implantation of pulse generator, includes programming
0313T  Vagus nerve blocking therapy (morbid obesity); laparoscopic revision or replacement of vagal trunk neurostimulator electrode array, including connection to existing pulse generator
0314T  Vagus nerve blocking therapy (morbid obesity); laparoscopic removal of vagal trunk neurostimulator electrode array and pulse generator
0315T  Vagus nerve blocking therapy (morbid obesity); removal of pulse generator
0316T  Vagus nerve blocking therapy (morbid obesity); replacement of pulse generator
0317T  Vagus nerve blocking therapy (morbid obesity); neurostimulator pulse generator electronic analysis, includes reprogramming when performed

BMI, a weight and height ratio, is often used to diagnose obesity by approximating body fat level. The National Institutes of Health and the World Health Organization have determined that a healthy BMI is between 18.6 and 24.9. BMI between 25.0 and 29.9 indicates an individual is overweight and a BMI greater than 30 indicates obesity.

Among children and adolescents, the Centers for Disease Control and Prevention (CDC) use the term “overweight” if the child is ≥ 85th percentile of BMI and “obese” as the group ≥ 95th percentile of BMI.

To calculate BMI:  

\[ \text{BMI} = \frac{\text{Weight} \text{ (kilogram)}}{\text{Height} \text{ (meter)}^2} \text{ or } \left( \frac{\text{kg/m}^2}{} \right) \]

Note:  To convert pounds to kilograms, multiply pounds by 0.45. To convert inches to meters, multiply inches by 0.0254.

All Current Procedure Terminology (CPT) codes, descriptions, and other data are copyrighted by the American Medical Association.

This document is for informational purposes only. It is not an authorization, certification, explanation of benefits, or contract. Receipt of benefits is subject to satisfaction of all terms and conditions of coverage. Eligibility and benefit coverage are determined in accordance with the terms of the member’s plan in effect as of the date services are rendered. Priority Health’s medical policies are developed with the assistance of medical professionals and are based upon a review of published and unpublished information including, but not limited to, current medical literature, guidelines published by public health and health research agencies, and community medical practices in the treatment and diagnosis of disease. Because medical practice, information, and technology are constantly changing, Priority Health reserves the right to review and update its medical policies at its discretion.

Priority Health’s medical policies are intended to serve as a resource to the plan. They are not intended to limit the plan's ability to interpret plan language as deemed appropriate. Physicians and other providers are solely responsible for all aspects of medical care and treatment, including the type, quality, and levels of care and treatment they choose to provide.

The name “Priority Health” and the term “plan” mean Priority Health, Priority Health Managed Benefits, Inc., Priority Health Insurance Company and Priority Health Government Programs, Inc.
