

Affordable prescription guide

Employer-sponsored plans — January 2017

Here's a list of the most commonly prescribed medications on the Priority Health approved drug list. Take this guide with you whenever you visit your doctor.

Remember, you'll save money when you use generics or preferred brand drugs.

- Generics (least expensive) are listed in lowercase
- Preferred brands are listed in UPPERCASE

This list isn't all-inclusive, and coverage varies based on your employer's plan. Coverage is not guaranteed and this list is subject to change. To verify coverage and see a complete list of approved drugs, go to priorityhealth.com or contact Customer Service using the phone number on the back of your Priority Health membership ID card.

Quick Relief Inhalers

PROAIR (Tier 1 copay)
VENTOLIN HFA

Thyroid Replacement

levothroid
levothyroxine sodium
levoxyl
unithroid

Over-the-counter (OTC) medications

Medications that do not require a prescription are not covered under the pharmacy benefit unless specifically listed. Employer-sponsored plans currently cover Prilosec OTC, Prevacid OTC, Zegerid OTC, and Zaditor OTC with a prescription.

Pharmacy & Therapeutics Committee

Doctors, pharmacists and other health care professionals from the Priority Health network meet six times a year to research and review the newest drugs on the market. Because of this attention to detail, you can be confident that our list is up-to-date with the highest quality, most effective choices to meet your needs. Cost is only a consideration when medical evidence shows that less expensive drugs in the same class are equally safe and effective.

Quantity limits and prior authorization

Certain medications may have monthly quantity limits (QL) or require prior authorization (PA) to ensure safe and appropriate use. Approval forms are available at priorityhealth.com and your doctor may submit a request by faxing 877.974.4411. You and your doctor will be notified regarding the decision within 15 days.

Step therapy

Some medications require step therapy because there are other drugs in the same category that are just as safe and effective but may cost less. This provides a safe alternative and saves you money. If the lower cost drug isn't effective or if it is medically necessary your doctor can work with Priority Health and request an exception.
